

Bio

Emmanuel Sulle is a consultant and PhD Candidate at the Institute for Poverty, Land and Agrarian Studies, University of the Western Cape, South Africa. He holds BA in Economics and Masters in Public Policy. He has over 10 years' research experience on a range of topics that include natural resource governance, land rights, inclusive business models and policy analysis. Emmanuel has published his work in several leading journals, co-authored a book and contributed several book chapters in peer reviewed books. His current research interests lie in exploring viable agricultural business models, land tenure and rural livelihoods in sub Saharan Africa. Contemporary research indicates the increased desire for food and energy production among rural smallholders. However, policy makers have contested arguments about the results of these investments to different actors. Emmanuel's research seeks to influence institutional frameworks for different undertakings in different contexts and economic sectors, and create inclusive business models that fairly redistribute benefits, costs and risks to enable sustainable development.
